TECHNOLOGY SERVING THE WORLD OF SNOW

RELAX, TAKE IT EASY & ENJOY

Tech4snow is a cloud service provider that enables an efficient and centralized management of IT services in enterprises of the snow and mountain sector.

A technical team brings together profound knowledge of the sector with extensive experience in the design and development of networking solutions, applying the latest technological standards. Therefore, your only concern will be enjoying your passion for snow and mountains.

WINTER

SUMMER

Our solutions are turn-key services and are designed by experts in the snow and adventure sports fields.

Multi-language, multidevice and multiplatform services, developed using standard technologies, guarantee to maximize your audience, independent of the type of device used to access it; computer, tablet, mobile phone, virtual reality glasses...

Tech4snow also provides the complete maintenance and the integration of these solutions with the existing information systems already implemented in your company as well as the winter/summer versions to help you to deseasonalise your business.

In short, everything needed to guarantee a solid and scalable service with solutions that give a 360 degree coverage.

The new standard of slope maps for ski resorts. Tech4snow Map is an integral solution for managing the information of your facilities. From a single point of content management, that allows you to oversee georeferenced information, facilities and points of interest, it is possible to automatically generate all the map formats that a resort needs, including:

Interactive 3D Map. A format that presents your resort in a realistic, attractive context and is easy to use. This format is perfect for planning a visit to the resort as well as for checking its current state, thanks to the possibility of locating specific positions, to consult the state of the slopes, the weather forecast, to watch the live webcams. This Map is available from the navigator of any updated device without additional plugins because it uses a WebGL standard technology.

Interactive 2D Map. Tech4snow provides a similar solution to the Interactive 3D Map with the same features but simplifying the navigation through a moving map in two dimensions.

2D Map to print. A traditional format for resort maps that comes from an actual projection and the elements represented in the resort area but with an more accurate and versatile outcome generated in a vectorial format and reproducible without scale limit. Contact Tech4snow to get other formats of the printed map like the resort "Trail Map", orthogonal view, etc.

3D Map to print. The printed map in three dimensions will be useful to increase your profit because it can be sold as a merchandising product of the resort. The map is available in rigid format or in flexible rubber format. A nice souvenir and an original way to advertise your resort. Contact Tech4snow to create other merchandising products from your resort map.

Export and import data in other formats. The Tech4snow Map allows converting resort data to other formats that can be used in other map technologies such as Google (Maps/Earth), as well as data importation from typical GPS device formats.

Tech4snow WEB is our solution to the full management of web portals of ski resorts. Don't worry about systems maintenance and technology updates because this service will provide the website framework of your resort and you only have to manage the content by accessing with your user name and password in our cloud manager.

Our solution includes an exclusive and customized design to each portal, a latest generation solution with SEO optimization, modern and responsive design containing all the integration facilities provided by Tech4snow for all our services.

TECH4SNOW VR

Tech4snow VR designs interactive virtual tours of the slopes in your resort in summer and winter, for sports such as ski, BTT, wingfly... the limit is your imagination. This tool is clearly the best way to offer your services to your target audience. Each tour is shown in an interactive way allowing you to move alongside it from the beginning to the end. Tech4snow offers you the opportunity to transform tours into playable slopes. Set up an on-line community of players in your resort!
